PROFILE

UX designer who takes digital products from user research and wireframe through to a shipped, accessible interface. Ten end-to-end builds to date — a commercial client platform, live consumer products, and an award-winning risk-intelligence tool — each one researched, designed, prototyped and iterated by me against real user and stakeholder feedback. I work to user-centered design principles against genuine constraints rather than ideal ones: five languages including Arabic right-to-left, dark mode, offline use, and accessibility built in from the first screen instead of retrofitted. Comfortable in cross-functional remote teams alongside product managers and developers, because I have sat on both sides of the handoff.

CORE SKILLS

UX & Interaction Design User flows · Wireframing · Low- and high-fidelity prototyping · High-fidelity mockups · Information architecture · Interaction patterns · Responsive and mobile-first design · Design systems and reusable components

Accessibility & Inclusive Design WCAG-oriented practice · ARIA roles, live regions and state · Keyboard navigation and visible focus management · Reduced-motion support · Semantic document structure · Right-to-left (Arabic) layout · Dark mode · Color contrast

User Research & Usability Testing User research · User and stakeholder interviews · Moderated usability testing · Observing users in context · Task and journey mapping · Heuristic review · Translating research findings into design decisions · Iterative testing and redesign

Visual & Brand Working to brand guidelines · Visual hierarchy · Typography · Layout and grid systems · Iconography · Design consistency across a product

Design Tools Figma · Adobe Photoshop · Adobe Illustrator · Adobe InDesign · Notion · Obsidian

Design-to-Development HTML5 · CSS · JavaScript · TypeScript · React · Next.js · Tailwind CSS · Git and GitHub · Developer handoff and design QA

Collaboration Fully remote delivery · Cross-functional teamwork · Async written communication · Working with product managers, developers and non-technical clients

SELECTED DESIGN WORK

Wave Fest — Yacht Charter Platform · Client engagement

LIVE · 2026

- Interviewed the owner and staff to map how enquiries actually arrived and where bookings were being lost, then designed the journey around those findings rather than around the previous site's structure.
- Designed the end-to-end experience for a UAE yacht charter operator: the public browsing and enquiry journey, transparent single-price quoting, and the back-office admin dashboard behind it.
- Designed a content editor the owner can use without a developer, so tours, yachts, pricing and FAQ content stay current — removing an ongoing cost and dependency for the client.
- Designed an in-context chat assistant answering from a knowledge base at the moment a customer hesitates — aimed at the drop-off point testing exposed, to protect conversion before enquiry.
- Ran usability sessions on the booking flow with the client and first-time users before launch, then reworked the steps where people hesitated — the enquiry path shipped shorter than it was designed.

Figma · React · Supabase · Responsive web

SENTRY — Cargo Risk Intelligence · Dubai Customs × University of Dubai

AWARD · 2026

- Information design challenge: make scanner imagery, customs declarations and watchlist data readable as one judgment on a single screen, for an officer under time pressure.
- Designed a 0–100 risk score with supporting flags and evidence, reducing a cross-check that took roughly 20 minutes of manual work to about 2.3 seconds per shipment.
- Validated the display with customs domain experts during the accelerator and cut the screen back to only the evidence an officer acts on.
- **Won the AI Automation Excellence Award, WEL.X AI Accelerator 2026.**

Stem by Stem — E-commerce & Checkout Experience

LIVE · 2026

- Watching shoppers browse revealed the real blocker: they knew the occasion and the feeling, not the flower — so category-first navigation stalled them.
- Designed an alternative entry point from that finding: the customer describes the feeling and the interface composes the bouquet, with a stem-by-stem manual path for those who prefer control.
- Full Arabic right-to-left layout and dark mode designed in from the start rather than added afterwards.
- Designed cart, Stripe checkout, account sign-in and same-day delivery selection across seven emirates.

- Designed the interface for an offline QR scanner that shows where a code actually leads before anything opens — and never opens a link on the user's behalf.
- The core design problem was making an invisible threat legible at a glance: unambiguous danger states for lookalike domains, punycode and mixed-script attacks.
- Tested the warning screens with non-technical users to check the danger state was understood without explanation, and rewrote the wording where it was not.
- Runs entirely on the device, so nothing about the user leaves the phone. 20 checks, 81 automated tests.

NoorDesk — Multilingual Front-Desk Console · Open source

2026

- Designed a triage interface that brings six channels — WhatsApp, Gmail, Outlook, Telegram, Instagram and web chat — into one queue, surfacing language, tone and urgency as scannable attributes so the next action is obvious.
- Supports five languages including Arabic, and is deliberately designed review-before-send to keep a person in control of every reply.

EXPERIENCE

Web Designer & Developer — Best Pick Mart, Dubai

2024 – 2025

- Designed and built the retailer's online storefront single-handedly, owning layout, visual design and product presentation end to end.
- Structured and published a catalogue of 100+ products with AED pricing — the information architecture, categorization and merchandising customers navigated to find what they wanted.
- Designed and implemented the checkout and payment gateway flow, and delivered on-page SEO — iterating the product pages and path to purchase to improve engagement and conversion.
- Maintained the live site throughout the engagement with no downtime.

WordPress · WooCommerce · Elementor · Payment gateways · SEO

ADDITIONAL PRODUCT WORK

- **Keel — Conversational CRM/ERP.** Designing an interface a business customizes by describing what it wants in plain language, removing consultant setup and staff training from the adoption path. 415 automated tests.
- **Netherd — Infrastructure Monitoring.** Designed alerting that leads with the diagnosed root cause rather than a wall of symptoms, so the reader knows what to do first. 11 modules.
- **Muneera — Salon Booking.** Designed the customer booking flow plus the owner's admin view. Watched first-time users book and removed the steps where they hesitated; confirmation reaches the owner on WhatsApp and email, where they already work.
- **AccessAudit — Security Operations Console.** Designed one-click remediation with a full audit trail for reviewing employee access after offboarding. 41 tests.
