

EBIN RAJ

AI & Digital Transformation · Information Systems Management Student

Sharjah, UAE · +971 55 401 6987 · ebinraj2007@gmail.com · linkedin.com/in/ebinraj2007 · github.com/ebinraj2007-cmd

SKILLS

Languages & Frameworks

Python · Java (OOP) · SQL · FastAPI · JavaScript · HTML/CSS

AI & Automation

AI/ML prediction models · workflow automation · Ollama · Claude API

DevOps & Monitoring

GitHub Actions · CI/CD · Prometheus · Grafana · Alertmanager · Linux

Web & Security

WordPress · WooCommerce · SEO · network & cybersecurity fundamentals

EDUCATION

B.Sc. Information Systems Management

MAHE Dubai · 2025 – 2028

Senior Secondary — CBSE

IES Indian Excellent School, Sharjah · 2024 – 2025

AWARDS

AI Automation Excellence Award

WEL.X AI Accelerator 2026 — for SENTRY
Selected for the WEL.X Employer Career Day (Emirates, Emirates NBD, Dubai Airports, Coca-Cola, dubizzle)

Hackathon 2026 — Dubai Customs × Univ. of Dubai

CERTIFICATIONS

Introduction to Modern AI — Cisco · 2026
Intro to Cybersecurity — Cisco · 2026
IT Essentials · Operating Systems — Cisco

LANGUAGES

English (Fluent) · Tamil (Native)
Malayalam (Native) · Arabic (Basic)
French (Basic)

PROFILE

I'm an Information Systems Management student who learns by building things. So far I've made four projects on my own and put them all on GitHub, and one of them, SENTRY, won an award at the WEL.X AI Accelerator this year. I'm Cisco-certified in AI, cybersecurity, and IT. I can start whenever you need me, full-time or part-time, in person or remote.

PROJECTS

- SENTRY — AI Cargo Intelligence** ★ WEL.X Accelerator Award · 2026
I made SENTRY during a two-day accelerator and it ended up winning the AI Automation Excellence Award. It looks at scanner images, customs paperwork, and watchlist data together and gives each shipment a risk score out of 100. What usually takes an officer about 20 minutes of cross-checking, the demo does in a few seconds.
[JavaScript](#) · [HTML/CSS](#) · [GitHub Pages](#) · [Live demo](#) · [Code](#)
- NoorDesk — Multilingual AI Front Desk** Open-Source · 2026
NoorDesk is a front desk that runs on your own computer. It pulls customer messages from WhatsApp, Gmail, Outlook, Telegram, Instagram, and a web chat into one place, figures out the language, the mood, and how urgent each one is, and then writes a reply back in the customer's own language for you to check before it goes out. It works in five languages, spots likely scams, and doesn't need internet. I wrote over 45 tests for it that run on every change.
[Python](#) · [FastAPI](#) · [Ollama](#) · [SQLite](#) · [Code](#)
- AccessAudit — Offboarding & Access Console** 2026
AccessAudit finds people who still have access they shouldn't. It takes the HR list of who actually works somewhere and compares it against who can still log into each system, then points out old logins, too much access, and accounts nobody has used in months. Fixing one takes a single click (revoke, reset, or dismiss) and every action gets saved to a log. It can read messy CSV, Excel, or JSON files on its own. I covered it with 36 tests.
[Python](#) · [FastAPI](#) · [SQLite](#) · [Claude API](#) · [Code](#)
- NMS — AI Network Monitoring Platform** Open-Source · 2026
NMS is monitoring for small IT teams. There's a central server and a small agent that sits on each machine, plus some automation that quietly handles the common problems on its own. It also uses a Python model to guess when a disk is about to fail and sends a warning by email before it actually does. I packaged the whole thing as a one-click Windows installer.
[Python](#) · [Prometheus](#) · [Grafana](#) · [Alertmanager](#) · [Code](#)
- WordPress Web Developer — Best Pick Mart, Dubai** 2024 – 2025
I built the online store mostly on my own. I designed the storefront, added and organised more than 100 products with their AED prices, got a working payment gateway set up, and did the on-page SEO. It stayed online the whole time I looked after it.
